

BID NO. 637

COAGULATION ANALYSER – CARDIAC CATHETER SUITE - £4,999

The Point of Care Testing Co-ordinator asked the League to support a bid for a coagulation analyser to replace the aging device used in the Cardiac Catheter Suite. The analyser is a hand-held device used to monitor a patient's clotting during procedures in the Suite and enable a rapid decision to be made by the clinician on the amount of anticoagulation to be given to the patient.

The equipment is linked to a database which can provide a full audit trail of results and to support continuity of care.
